linkedin.com/in/ege-kısmet-300a5a445

Between September and November 2026 I built **22 projects**; **9 are live on the web** and five update themselves. I measure my AI experiments with hidden tests and confidence intervals, and I write up the ones that didn't work, with their results. Some of my apps have real users: my family, my uncle, local shops, and the players of a party game.

SELECTED PROJECTS

Mevzuat Haritası (Legislation Map)

Python · data pipeline · OCR

Turkey's Official Gazette 2000–2026: 99,697 regulations from the index of 10,608 issues; an interactive site showing which law changed how many times. birtohum.github.io/mevzuat-haritasi

Meclis'in Dili (The Language of Parliament)

Python · text processing · JS

Turkish parliamentary records 1996–2026: 3,731 sessions, 69 million words; an Ngram-style site for word frequency by year. birtohum.github.io/meclisin-dili

Usta

Python · LLM agent · evaluation

A Turkish coding agent where a second model writes tests without seeing the code. 114 tasks × 3 repeats, 1,026 runs with hidden tests: independent verification gave no gain (60% → 58%), and the reason was measured. Submitted to the Meta AI Developer Hackathon. github.com/birtohum/usta

Tohum

PyTorch · LoRA · H100

A 4.8M-parameter character-level Turkish language model trained from scratch (RTX 3060, 21 min); fine-tuned Qwen3-8B with LoRA on Turkish instructions, beating the official model 10–2 on a 30-question test. 156,334-example dataset open on Hugging Face.

Sepet Enflasyonu · Kaç Sigara? · İETT Dakiklik

GitHub Actions · scheduled jobs

Three sites that collect their own data every day: an 83-item grocery basket index compared with CPI; province-level PM2.5 from the ministry's 210 stations; Istanbul bus punctuality from İETT's live vehicle positions.

Türkiye sallandı · Türkiye geceleri · İstanbul semaları

Python · satellite data · Leaflet

Three sites on open global data: province-level earthquakes from the EMSC/USGS catalogues (every 3 hours); 2012–2024 VIIRS satellite night lights for 973 districts; aircraft over Istanbul and airport estimates from OpenSky ADS-B data.

Seslendir.io

Next.js · TypeScript · VPS

A multiplayer "blind dubbing" party game, live with real players on its own server (AWS EC2, pm2, Caddy); 939 dubs and 10,830 recorded lines by the site's counter. Leaderboards, badges and 23 free tools (subtitles, vocal separation, AI image generation). seslendir.site

Bizim Masa

React Native · Expo · Firebase

A password-free, large-text family games room for my parents: 13+ games, turn-based or live; rules live in tested engine files and moves are validated on the server.

OTHER PROJECTS

Gazette Digest (daily Official Gazette summaries, every claim matched to a verbatim quote; 25/25 in a manual check) · Review Replier (reply drafts for local shops that don't invent promises; 15/15) · T-shirt Workshop (Turkish idea to Etsy-ready design, for my uncle) · Kaynaş (a parent-consented friendship platform for young people, Next.js + Supabase) · Neighbourhood Sites (one-page sites for local shops) · S. (an Electron desktop app that drives Claude Code until a task is done, 149 commits) · Here Comes the Inspector! (Godot game prototype) · DDNet Reward (C++ game client mod, no cheats) · Hardstyle Studio (hardstyle versions of songs with Demucs) · Crypto RL bot (lost to buy-and-hold in 4 of 4 periods; reported as a negative result).

SKILLS

Languages	Python, JavaScript / TypeScript, C++, GDScript
Web & mobile	Next.js, React Native (Expo), Electron, D3, static sites, accessible interfaces
Data	Web scraping (within site rules), OCR, data pipelines, index calculation, daily updates with GitHub Actions and scheduled jobs
AI	LLM APIs and agents (tool calling, sandboxed workspaces), LoRA fine-tuning, evaluation design (hidden tests, bootstrap confidence intervals, mutation testing)
Infrastructure	Linux VPS, pm2, Caddy, Firebase, Supabase, Cloudflare Pages, GitHub Pages, WSL

All numbers come from each project's own records. Most projects were built with AI assistance (Claude Code). Details and screenshots: birtohum.github.io
